

**Exhibit E-25**

This exhibit consists of this explanatory text and the attached single channel spacing study. As the single channel spacing study will demonstrate, the proposed facility would be in compliance with the provisions of Section 73.207 of the Commission's Rules.

The spacing study lists three facilities to which the proposed facility would be short spaced. The first of these is to KISD(FM), which is the proposed facility, therefore, this indicated short spacing is moot. The other two short spacings pertain to pending applications for a new station at Lennox, South Dakota.

Both of these applications were filed under the provisions of Section 73.215 of the Commission's Rules. As a result of the Lennox applicant requesting authorization under this section of the rules, it was necessary for them to demonstrate adequate contour protection to full class C facilities for KISD(FM). The short spacings indicated to the proposed Lennox facilities are therefore also moot.

Since none of the short spacings indicated on the single channel study are applicable, it is respectfully submitted that the proposed facility would be in compliance with Section 73.207 of the Commission's Rules.
