

**EXHIBIT 12**  
**Waiver Request of Section 74.1204**  
Pahrump, NV K211DC  
Minor Change – Antenna  
December 2009  
Calvary Chapel of Twin Falls, Inc.

The proposed site is contained entirely inside the service contour of second-adjacent FM Stations KCNV Las Vegas and KSOS Las Vegas

**KCNV**

The proposed site is contained entirely inside the service contour of second-adjacent FM Station KCNV, 209C2, .550kW, Las Vegas, NV. The level of least arriving protected F(50,50) signal at the proposed transmitter site is 99.6-dBu and using the Undesired-to-Desired method for calculating proposed interference, the interfering contour is 139.6-dBu (free-space contour method employed). The interfering signal would, in the worst case at the maximum radial, extend 2 meters from the center of radiation, which already exists at 11 meters AGL. This interference contour does not touch the ground. Attached is a portion of the USGS Cottonwood Pass(NV) Quadrangle showing this tower is located on Mt. Potosi and there are no residences, businesses or major roadways located near this communications site, which is only accessible by a gate that is always locked. Because there are no businesses, residences or major roadways located within this interfering contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second -adjacent FM Station KCNV.

**KSOS**

The proposed site is contained entirely inside the service contour of second-adjacent FM Station KSOS, 213C, 100kW, Las Vegas, NV. The level of least arriving protected F(50,50) signal at the proposed transmitter site is 74.5-dBu and using the Undesired-to-Desired method for calculating proposed interference, the interfering contour is 114.5-dBu (free-space contour method employed). The interfering signal would, in the worst case at the maximum radial, extend 43 meters, or 140 feet from the base of tower. Attached is a portion of the USGS Cottonwood Pass(NV) Quadrangle showing a 500 foot interference area ( circumference area marked in yellow) around the tower, which is located on Mt. Potosi and there are no residences, businesses or major roadways located in or near this interference contour, which is only accessible by a gate that is always locked. Because there are no businesses, residences or major roadways located within this interfering contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent FM Station KSOS.
