Re: KOBE(AM), Las Cruces, NM, Facility ID No. 54945

Mr. Smith,

This letter provides proof of satisfaction of Condition 1 in the construction permit for new FM translator station K244FF, Las Cruces, New Mexico (File No.BMPFT-20181009BPE), which relates to the mounting of the K244FF antenna on the existing tower of KOBE(AM).

KOBE antenna resistance was initially measured on September 10, 2018 prior to any tower work and then again on October 17, 2018 after the K244FF antenna installation had been completed.

The KOBE resistance as measured in September was 606 Ohms.

The KOBE resistance as measured in October was 605 Ohms.

A comparison of the September and October measurements falls well within the two percent tolerance specified in Condition 1 of the K244FF construction permit.

Sincerely,
