Special Operating Conditions
W295CK Transmitter site move
BPFT-20181207AAD
Exhibit 10
April 2019

Special Operating condition #1 – The licensee continues operation of W295CK with WNYG(AM) as its primary station. It should be noted that the four year period that W295CK must rebroadcast only the programs of WNYG(AM) begins at 07 August 2017, the initial date of operation, not with the implementation of this minor change application.

Special Operating condition #2 of the construction permit requires a proof of performance of co-located and co-owned WNYG (AM), Medford, NY and WLIM (AM), Patchogue, NY. These proofs of performance cannot be completed at this time because one tower of the WLIM (AM) night directional antenna collapsed during a storm, and WLIM (AM) is operating omnidirectionally under a Special Temporary Authority (STA). The installation of the translator antenna did not effect the parameters of its STA antenna.

Although the WNYG(AM) nighttime antenna was largely unaffected, by the collapse and is operating with antenna parameters and monitor points within limits, it will be required to conduct a proof of performance when the WLIM(AM) tower is reconstructed. The installation of the translator antenna did not effect the parameters of its day or night antenna.

As a result it is impractical to conduct a proof of performance for WLIM(AM) until its night antenna is restored, and the WNYG(AM) until the replacement tower is constructed and detuned, it is requested that action on this application is held in abeyance until the replacement tower is constructed and detuned for WNYG(AM) and until WLIM(AM) files its direct measurement application upon completion of the restoration of its night antenna.

Special operating condition #3 – The licensee of W295CK is the only occupant of the site, and will assure that all persons with access to the site are protected from exposure to non-ionizing radiation according to the FCC guidelines.

Special operating condition #4 – The licensee of W295CK requests that this application remain on file until the repairs to the WLIM(AM) antenna are complete, and the required proofs of performance can be completed.
