

EXHIBIT 34

KFRG(FM) aux#3
FCC 301-FM Application
Environmental
July 31, 2015

The proposed KFRG auxiliary antenna, an ERI model LP-2E-DA-HW, 2 bay, $\frac{1}{2}$ wavelength spaced directional, will utilize an existing tower also supporting the main and auxiliary antennas owned by KOLA. The tower is a non-registered, un-lit structure. No change is proposed in the overall height or lighting of the tower.

The KOLA tower is located at an antenna farm in proximity of other FM and DTV emitters. Prior to the filing of a license application for the constructed KFRG auxiliary antenna, RF field measurements will be made of the area to determine the result of any change in the RFR environment resulting from the addition and operation of the KFRG auxiliary antenna. The measurement report will be submitted to the Commission as part of the KFRG auxiliary antenna application for license.
