Interference Area to WBPT
Clanton, Alabama

The Proposed translator is within the 60 dBu contour of upper second adjacent station WBPT, channel 295. The WBPT contour at the translator site is 61 dBu F(50,50). Using the ratio of 100:1 (translator to WBPT) on the second adjacent channel, the population within the proposed translator 101 dBu contour is zero. Using the free space equation, the predicted interference area is expected to extend 108 meters from the antenna. The antenna is 116 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
