The Bridge of Hope, Inc.
Interference Area
Ocean City, MD

The Proposed translator will broadcast on 256, which is within the 60 dBu contour of second adjacent station WPSB-LP on channel 258, Fac ID 194742. WPSB-LP's contour at the translator site is 102.5 dBu F(50,50). Using the ratio of 100:1 (translator to KPSB-LP), the population within the proposed translator 142.5 dBu contour is 0 (zero). Applying the antenna manufacturer's vertical radiation pattern the area of interference is able to be more accurately calculated geometrically than just by using the free space equation alone. This particular antenna is a one bay Shively 6812b. It was determined from the manufacturer's vertical plan that at 50 degrees below horizontal the interference area would extend 3.1 meters toward the ground and extend 2.6 meters horizontally. We have proposed the antenna radiation center will be 37 meters above ground (33.5 meter building & 3.5 meter tower) with an Effective Radiated Power of 120 watts, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference area of the translator.

Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
