

KRRE Special Condition #5

Population Coverage Exhibit

Prepared using well proven Longley Rice modelling techniques, and publicly available SRTM terrain data. Population figures are derived from 2010 US Census.

KRRE meets the requirements stated under 47 C.F.R. Section 73.315. The 70 dBuV/m (3.16 mV/m) contour covers a population of 17,741 residents. Within city limits, the population of Las Vegas, NM during the 2010 Census survey was 13,753.

The modeling techniques used for this study satisfy the guidelines for height above average terrain and RF propagation under 47 C.F.R. Section 73.313.
