Interference Area to WLVE and WZTA
Oakland Park, Florida

The Proposed translator is within the 60 dBu contour of lower third adjacent station WLVE channel 230 and upper second adjacent station WZTA channel 235. The WLVE and WZTA contour at the translator site is 83.1 dBu F(50,50). Using the ratio of 100:1 (translator to WLVE and WZTA) on the third and second adjacent channel, the population within the proposed translator 123.1 dBu contour is zero. Using the free space equation, the predicted interference area is expected to extend 33 meters from the antenna. The antenna is 38 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
