

Environment Impact & RFR Compliance Statement

FM translator W203AT is located at an established communications site that is in compliance with all environmental impact requirements.

The minor change application proposes a change to Channel 267, operating with 0.038 kW ERP (non-da, V only) at a COR height above ground of 65 meters. For a worst case estimation at 2 meters above ground level at the base of the tower the RFR is **.2%** of the general population/uncontrolled MPE limit.

Per OET 65, facilities that contribute at the site no more than 5% of the general population/uncontrolled MPE limit comply with the requirements of OET 65 with no further study. Furthermore, per Section 1.1307(b)(1) Table 1, any Part 74 Subpart L facility with less than 100 watts ERP is categorically excluded from environmental evaluation. Therefore the proposed minor change application of W203AT complies with all environmental and RFR requirements.

RFR hazard signs are posted at the site and the site has restricted access to only authorized personnel. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility is posted.
