

EXHIBIT 11

Calvar Chapel of Twin Falls, Inc.
June 2002

Huntley/Billings, MT

K210CV

BLFT-20000524ABJ

Calvary Chapel is requesting this minor change to change channel/frequency from 210/89.9MHz to 213/90.5MHz and increase ERP from 50 watts to 62 watts. Due to the CP grants of the following FM Stations, Calvary Chapel finds it necessary to change frequency.

Granted 5/30/02 - BPED-19971113ME, Fac ID 89078 – Channel 211

Granted 5/30/02 - BPED-19980824MC, Fac ID 91499 – Channel 215

The coax that is existing for licensed stations K215DL and K210CV, Licensee Calvary Chapel of Twin Falls, Inc., will not be changed. At present these two stations are operating utilizing the same antenna system, a single bay “off-the-shelf” directional SCALA FMV, vertical only, using a Telewave Combiner. K217EM, now operating under license K215DL, will be constructed upon grant of this application, and spurs emissions will be conducted. A letter from the Antenna Manufacturer, Kathrein Scala Division, should not be necessary, as these stations have been in operation for several years under the same circumstances. The SCALA FMV could easily be replaced with an omni directional antenna system, but is utilizing the Scala FMV because the terrain to the south prevents a signal and the present antenna has less tower loading, due to its size.

The following Exhibits are submitted with this application.

EXHIBIT 11 – CFR Compliance and explanation of Exhibits

EXHIBIT 12 – Page #1 of Waiver Request of Section 74.1204 – second-adjacent newly granted Full Power CP’s and existing K215DL, Billings, MT, which will be moving to channel 217 – K217EM.

EXHIBIT 12a – Page #2 of Waiver Request. U/D Ratios shown for newly granted CP’s.

EXHIBIT 13 – Letter from TV Channel 6, KSVI, Billings, MT. A new letter to the applied for Channel is being issued by KSVI and will be submitted upon arrival.
