May 14, 2007

In evaluating the proposed Digital Flashcut for K15HV, an outgoing interference study was executed on the proposed parameters on channel 15(T) with an ERP of 15 KW. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology with a cell size of 1km and a 0.1km radial spacing, there was zero percent interference present found in each case when rounded to the nearest percent.
