COMPREHENSIVE TECHNICAL EXHIBIT

Application for Minor Change to Licensed Facility
K46HN, FCC ID 127758, Odessa, TX
FCC File Number BLTTL-20061107AEN
Prism Broadcasting Network, Inc.

Application for Minor Change of Licensed Facility. This application seeks a small change in transmitter location thanks to difficulty of access to the licensed tower. The changes are two: (1) the TL is moved 1.5 km and (2) the new location tower is a short unregistered tower only 10 meters in height. Protected contour overlap exists between the new and previous locations.

Use of unregistered antenna structure. The antenna structure is a 10 meter tall mast adjacent to the building which houses the transmitting equipment. The site requires no registration per Tower.

Analysis of interference. Longley-Rice methodology using the FCC Techware, Inc., program was employed in the study and no station was found to suffer greater than 0.5% interference arising from this proposal. The facilities studied are:

BNPTTL-2000830BLC	NEW, Midland, TX
BNPTTL-2000831CIW	NEW, Odessa, TX

Accordingly, waiver of applicable portions of §74.707 is requested.
