

TECHNICAL EXHIBIT
LONG-FORM APPLICATION FOR PAIRED
DIGITAL CHANNEL CONSTRUCTION PERMIT
TV TRANSLATOR STATION K66AZ
PRINEVILLE, OREGON
CH 22 0.25 KW (MAX-DA)

Technical Exhibit

The technical exhibit supports a long-form application for construction permit for a paired digital channel for TV Translator Station K43IH on analog Channel 43, assigned to Prineville, Oregon. The associated short-form application (BSFDTT-20060630CDH) has been declared a singleton by the Commission.

Summary of Proposed Facilities

Below is a tabulation of the proposed paired digital facility:

Channel:	22
Geographic Coordinates:	44° 26' 17" North Latitude 120° 57' 14" West Longitude
Antenna Structure Registration:	N/A
Overall Tower Height:	29 meters
Ground Elevation:	1709 meters
Radiation Center:	1727 meters AMSL 18 meters (60 feet) AGL
Antenna Type:	RFS RD8A - 12.2 dBd Power Gain: 16.6
Antenna Major Lobe Orientation:	230° True
Transmitter Power Output:	20 Watts
Emissions Mask:	Stringent
Transmission Line:	LDF5-50A (7/8" Foam - 100 feet)
Effective Radiated Power:	0.25 kilowatt

Allocation Considerations

A study has been conducted to assure that the proposal will not create prohibited interference with other licensed, authorized or pending analog or digital TV, LPTV/translator and Class A TV stations. Using the procedures outlined in the FCC's OET-69 Bulletin, no new interference is predicted to be caused to any other station as shown by the results provided in Figure 1.

Radiofrequency Electromagnetic Field Exposure

The proposed facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the antenna is located 28 meters above ground level. The proposed ERP of 0.25 kW is assumed. A conservative relative field value of 0.25 was assumed for the transmitting antenna's downward radiation. The calculated power density at ground level is less than 0.001 mW/cm^2 . This is less than 5% of the FCC's recommended limit of 0.42 mW/cm^2 for channel 22 for an "uncontrolled" environment.

Access to the transmitting site will be restricted and appropriately marked with warning signs. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

du Treil, Lundin & Rackley, Inc.

Consulting Engineers

Page 3
Prineville, Oregon

It is noted that this statement only addresses the potential for radiofrequency electromagnetic field exposure.
