

**Engineering Exhibit**  
**KDJE (FM), Jacksonville, AR (FID 23025)**

**RF Radiation Compliance**

This proposed auxiliary transmit facility is diplexed with station KMJX which is applying by separate application for these facilities. KDJE and KMJX will be combined into the same antenna.

The Proposed facilities were evaluated in terms of potential radio frequency radiation exposure at ground level in accordance with OET Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radio frequency Radiation."

The proposed antenna system is an EPA type 3, 2- bay, "Rototiller" single wave spaced antenna, mounted with its center of radiation 112.8 meters above ground level, and will operate with an effective radiated power of 16.7 Kilowatts in both the horizontal and vertical planes. At 2 meters above ground, at 74.4 meters from the base of the tower, this proposal will contribute worst case less than, 12.74 microwatts per square centimeter, or 1.274 of the allowable ANSI limit for controlled exposure, and 6.37 percent of the allowable limit for uncontrolled exposure. It is therefore believed that this proposal is in compliance with OET Bulletin Number 65 as required by the Federal Communications Commission.

Further, the applicant will see that signs are posted in the vicinity of the tower, warning of potential radio frequency hazards at the site. The site itself is restricted from public access. The applicant will cooperate with other users of the tower to reduce power of the facility, or discontinue operation, as necessary to limit human exposure to levels less than specified by the Federal Communications Commission should anyone be required to climb the tower for maintenance or inspection.
