APPLICATION TO CORRECT COORDINATES
BL19850703AA
WTEL (AM) 1160kHz, Class B, 5kW-ND/D, 250w ND/N
Red Springs, NC

July, 2014

TECHNICAL STATEMENT

This technical statement has been prepared on behalf of WDAS License Limited Partnership, licensee of AM radio station WTEL, Red Springs, North Carolina. This application seeks only to correct the licensed geographic coordinates for WTEL. WTEL has, in fact, operated with the currently licensed operating parameters from the same identical location for more than thirty years. There are no other changes requested in any operating parameters for this station.

NARRATIVE

This application will serve to demonstrate that using the corrected coordinates for the single tower used by WTEL for both day and night operation there is no substantive difference in the day or night allocation for WTEL. When a recent survey of the existing WTEL tower site was conducted, it was found that the actual tower location is 0.31km (1000ft.) from the licensed location on a bearing of 285.5° T.

Following are the geographic coordinates of record and the corrected coordinates:

LICENSED (NAD27)

34° 50' 19" North Latitude
79° 10' 36" West Longitude

CORRECTED (NAD27)

34° 50' 21.7" North Latitude
79° 10' 47.8" West Longitude

Exhibit A shows USGS maps indicating the licensed and corrected location of the WTEL tower. The tower location was confirmed by George T. Paris and Associates, P.A. Licensed land surveyor in the Red Springs, NC area. As can be seen by the USGS map, the topographic map photo-revision indicates the correct location of the WTEL Tower (shown as WYRU). To reiterate, there is no change in the actual location of the WTEL tower, only the location of record. A satellite map (DOQQ 1m resolution) of the tower location is attached as Exhibit B.

The overall tower height including base is 37.2m which is well under the 200ft (61m) trigger for required FAA notification or antenna structure registration. A Towair determination was run on the corrected coordinates using the established tower height and it was further determined that the tower does not require notification based upon glide slope. A copy of the Towair results is attached as Exhibit C.

WTEL Ground System

There will be no change to the WTEL ground system. The ground system consists of one hundred twenty (120) buried copper radials, 64 meters in length except where they intersect with property boundaries. Copper strap also connects the WTEL tower base to the main transmitter grounding point.

Daytime Allocation Study

The correction to the licensed operation of WTEL slightly reduces the interfering contours in most directions and does not substantively increase the interference of record in any direction. The current WTEL allocation includes some grandfathered protections as well as field measurements to/from other facilities. Preparing a full analysis of those protections would create needless complexity to this

application which proposes only to correct coordinates by a diminimus amount. To demonstrate this, a number of exhibits have been prepared:

Exhibit D-1 indicates the extent of the licensed vs. actual 0.025mV/m contours.

Exhibit D-2 indicates the extent of the licensed vs. actual 0.25mV/m contours.

Exhibit D-3 indicates the extent of the licensed vs. actual 0.5mV/m contours.

Exhibit D-4 indicates the extent of the licensed vs. actual 5mV/m contours including coverage of the community of license.

Exhibit D-5 indicates the extent of the licensed vs. actual 25mV/m contours.

Exhibit D-6 indicates the licensed vs actual nighttime NIF Service

Exhibit E is a daytime allocation map showing the licensed and proposed contours with respect to pertinent protections using M3 conductivity. As can be seen, there is virtually no difference in the licensed versus actual operation. It should be noted that WTEL has operated as shown from the actual coordinates which have been filed in this application for over 30 years.

WTEL Nighttime Allocation Study

The night operation of WTEL at 250 watts from the corrected site location does not negatively impact the current night allocation of WTEL. As noted above, there is NO physical change in the WTEL towers' actual location.

WTEL when operating from the corrected coordinates very slightly increases the RSS calculations for WJFJ (LIC and CP) and WODY, however, it is obvious from the numbers shown in Exhibit F that the

change does not change any of the required protections, nor does it negatively impact the nighttime interference free calculations of any other stations.

A Protections Report is shown in Exhibit G-1 and G-2. As demonstrated, there is essentially no impact to other stations.

Critical Hours Analysis

An analysis of the licensed daytime operation of WTEL during critical hours determined that no modification of the daytime operation from the corrected coordinates is necessary in order to comply with critical hours protections. The critical hours analysis is attached as Exhibit H.

Conclusion

As shown in the above report, the 310 meter correction of coordinates for WTEL will not in any meaningful way change any existing protected coverage or interference level to or from any other station daytime or nighttime. The applicant respectfully requests the Commission grant the above referenced corrections in the operating coordinates to WTEL (AM) without requiring any other changes to its licensed operating parameters.

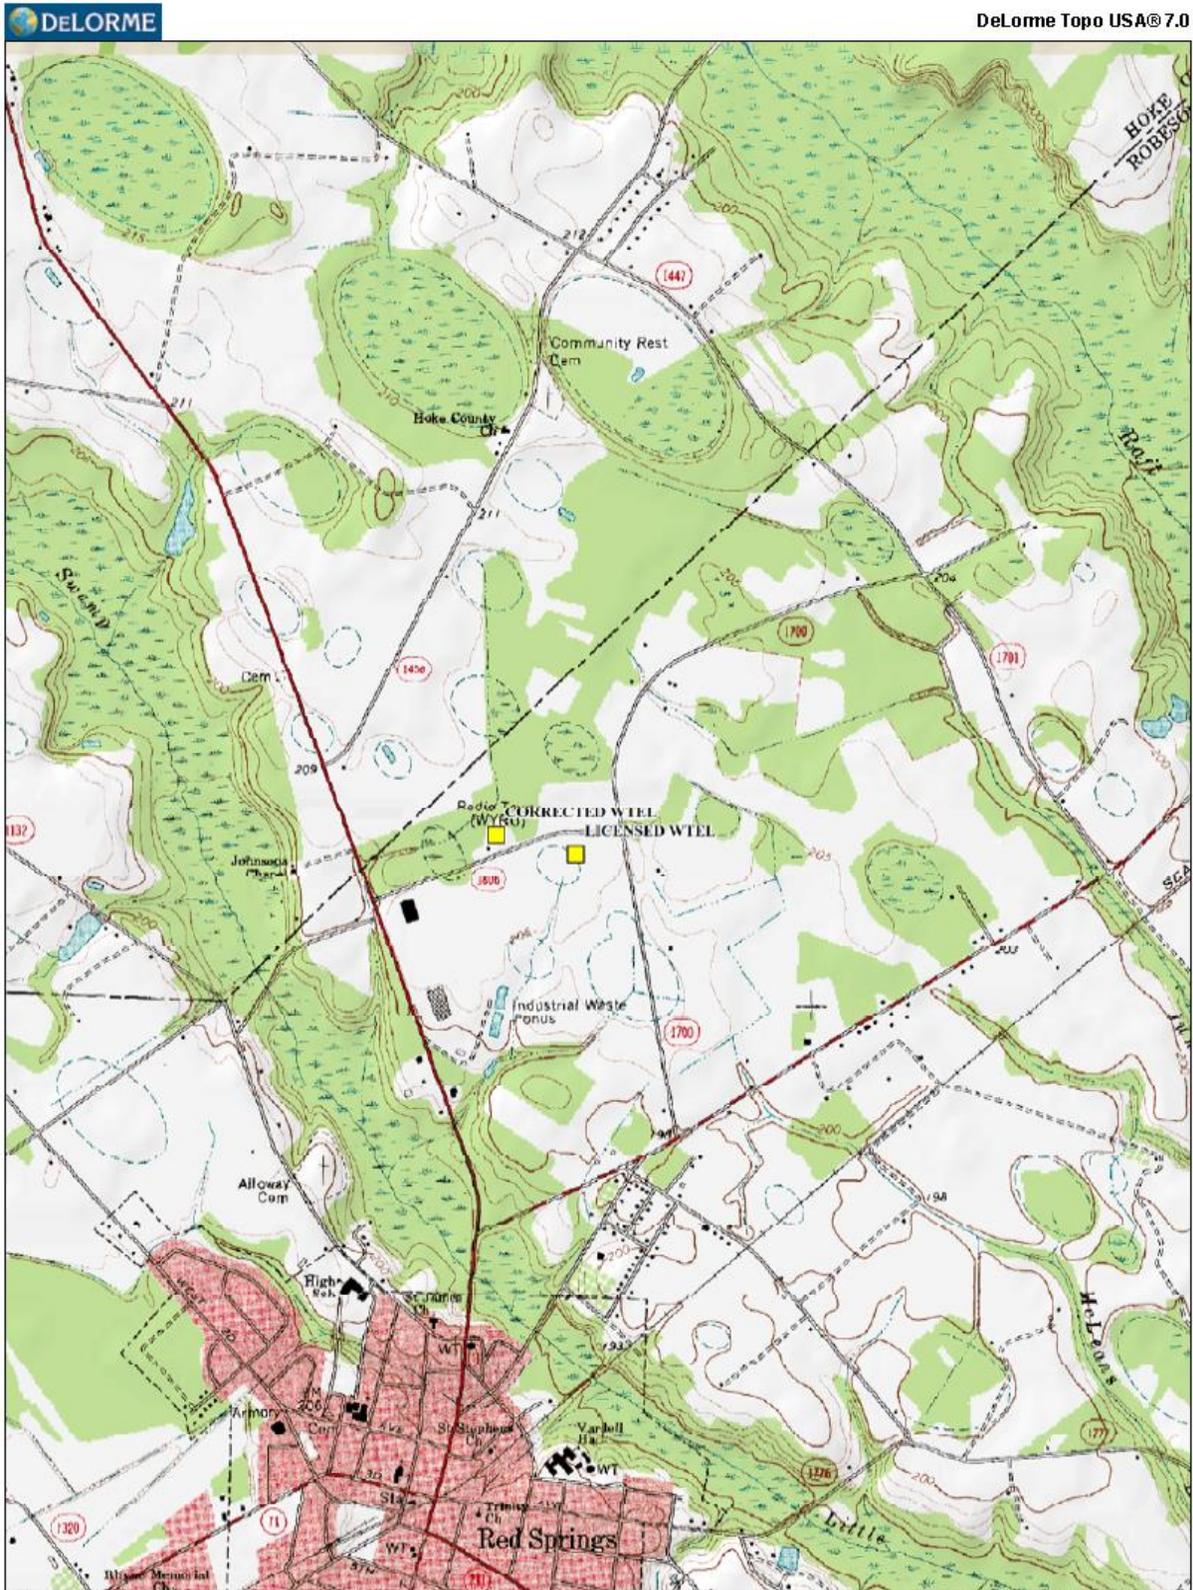

Respectfully submitted

Towair Search Results

TOWAIR Determination Results

***** NOTICE *****

TOWAIR's findings are not definitive or binding, and we cannot guarantee that the data in TOWAIR are fully current and accurate. In some instances, TOWAIR may yield results that differ from application of the criteria set out in 47 C.F.R. Section 17.7 and 14 C.F.R. Section 77.13. A positive finding by TOWAIR recommending notification should be given considerable weight. On the other hand, a finding by TOWAIR recommending either for or against notification is not conclusive. It is the responsibility of each ASR participant to exercise due diligence to determine if it must coordinate its structure with the FAA. TOWAIR is only one tool designed to assist ASR participants in exercising this due diligence, and further investigation may be necessary to determine if FAA coordination is appropriate.

DETERMINATION Results

Structure does not require registration. There are no airports within 8 kilometers (5 miles) of the coordinates you provided.

EXHIBIT H CRITICAL HOURS ANALYSIS

Critical Hours Radiation Report

Call: WTEL
 Freq: 1160 kHz
 RED SPRINGS, NC, US
 Hours: D
 Lat: 34-50-21.70 N
 Lng: 079-10-47.80 W
 Power: 5.0 kW
 Theo RMS: 282.00 mV/m @ 1km @ 1kW

#	Field Ratio	Phase (deg)	Spacing (deg)	Orient (deg)	Height (deg)	Ref Swtch	TL Swtch	A (deg)	B (deg)	C (deg)	D (deg)
1	1.000	0.0	0.0	0.0	50.4	0	0	0.0	0.0	0.0	0.0

Interpolation factors for 1160 kHz:

K(500) = 0.000
 K(1000) = 0.733
 K(1600) = 0.267

 Call: KSL
 Freq: 1160 kHz
 SALT LAKE CITY, UT, US
 Hours: U
 Lat: 40-46-46 N
 Lng: 112-05-56 W
 Power: 50.0 kW
 Theo RMS: 399.12 mV/m @ 1km @ 1kW

#	Field Ratio	Phase (deg)	Spacing (deg)	Orient (deg)	Height (deg)	Ref Swtch	TL Swtch	A (deg)	B (deg)	C (deg)	D (deg)
1	1.000	0.0	0.0	0.0	193.2	0	0	0.0	0.0	0.0	0.0

Permissible radiation calculated using FCC 73.190 curves.

Class A Azimuth (deg)	Reference Azimuth (deg)	Distance to 0.1 mV (km) / (mi)	Max Vert Angle (deg)	Max Rad Below Ang (mV/m@1km)	Permiss Radiation (mV/m@1km)	Margin (mV/m@1km)
