

TECHNICAL EXHIBIT  
APPLICATION FOR MODIFICATION OF  
DTV CONSTRUCTION PERMIT  
DTV STATION WTLH-DT  
BAINBRIDGE, GEORGIA  
CH 50 230 KW 597 M

Technical Narrative

The technical exhibit of which this narrative is part was prepared in support of an application for modification of construction permit for DTV station WTLH-DT on channel 50 at Bainbridge, Georgia. Station WTLH-DT is currently authorized (BPCDT-19980928KH) to operate on channel 50 with a non-directional effective radiated power (ERP) of 1000 kilowatts and an antenna radiation center height above average terrain (HAAT) of 578 meters. It is proposed to modify the authorized facility by increasing the antenna radiation center height above average terrain (HAAT) to 597 meters and decreasing the maximum directional ERP to 230 kW. No other changes are proposed.

Compliance with the current DTV Freeze

The proposed 41 dBu contour will not extend beyond the currently authorized 41 dBu contour in compliance with the FCC's *Freeze on the Filing of Certain TV and DTV Requests for Allotment or Service Area Changes*. Figure 2 is a map showing the 41 dBu contours for the authorized and proposed facilities. As shown on Figure 2, the proposed noise-limited contour is wholly encompassed by the authorized noise-limited contour.

Proposed Operation

It is proposed to operate on DTV channel 50 from the following site coordinates, N 30°40'51" W 83°58'21". It is also proposed to operate with an ERI ATW30H2-HTOU-49H horizontally polarized non-directional antenna, a maximum ERP of 230 kW and an HAAT of 597 meters.

Notification to the FAA is not necessary, as there is no proposed change in the overall height of the existing structure. The

antenna structure registration number (ASRN) for the existing tower is 1054890.

Response to Paragraph 10 - Antenna Data

Figure 1 provides the vertical plane radiation pattern data for the ERI ATW30H2-HTOU-49H antenna.

Response to Paragraph 12 - City Coverage

Figure 2 is a map showing the FCC predicted DTV coverage contours. The map provides the FCC predicted 41 dBu f(50,90) noise-limited contour and 48 dBu f(50,90) city grade contour. The extent of the contours has been calculated using the normal FCC prediction method and a 30-second digitized terrain database. The Bainbridge city limits were derived from information contained in the 2000 U.S. Census for Georgia. As shown, the 48 dBu contour encompasses the entire city limits of Bainbridge.

NTSC/DTV/Class A Allocation Considerations

Figure 3 is a DTV channel 50 separation study toward other NTSC and DTV allotments based on a 50 kilometer "buffer". Although the separation requirements are only applicable to new DTV allotments, they can be used as an indication of which stations have the potential of receiving interference from the proposed channel 50 DTV operation.

An interference analysis has been conducted using the procedures outlined in the FCC's OET-69 bulletin, which demonstrates that the proposal complies with the interference protection provisions of Section 73.623(c)(2).<sup>1</sup> Interference calculations for the proposed operation are summarized below with respect to all authorized NTSC, DTV, and Class A facilities.

---

<sup>1</sup> The du Treil, Lundin & Rackley, Inc. DTV interference analysis program is based on the program and procedures outlined by the FCC in the Sixth Report and Order; subsequent Memorandum Opinion and Order; and FCC OET Bulletin No. 69. A nominal grid size resolution of 2 km was employed. A Sun based processor computer system was employed.

Station	Facility	Ch.	City	State	FCC Service Population	Proposed Interference Population	% of Baseline

WFXU	LIC	57	LIVE OAK	FL	--	--	None

As shown above, the proposal on channel 50 complies with the FCC's interference standards towards all authorized NTSC, DTV and Class A stations.

#### Objectionable Interference

There are no known authorized full service AM stations within 5 kilometers (3 miles) of the proposed transmitter site. Figure 4 provides a tabulation of the FM and TV stations within 16 kilometers of the proposed site. Although no adverse electromagnetic impact is expected, the applicant recognizes its responsibility to correct problems, which are a result of its proposed DTV operation.

The proposed transmitter site is 1229 kilometers from the Canadian border. It is also more than 1056 kilometers from the US/Mexican border area. The closest FCC monitoring is at Powder Springs, Georgia, approximately 361 kilometers to the north. The proposed DTV site is outside the National Radio Quiet Zone (VA/WVA), the closest point being 823 kilometers to the north-northeast. The

closest point of the Table Mountain Radio Quiet Zone (CO) is more than 2185 kilometers to the northwest. The closest radio astronomy site operating on TV channel 37 is at Green Bank, West Virginia located approximately 941 kilometers to the north-northeast. These separations are sufficient to not be a concern for coordination purposes.

Response to Paragraph 13 - Environmental Protection Act

The proposed facility has been evaluated in terms of potential radiofrequency electromagnetic field exposure at ground level in accordance with OET Bulletin No. 65, Evaluating Compliance with FCC Specified Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields<sup>2</sup>. The power density at the base of the tower was calculated using the appropriate procedures contained in the Bulletin.

The radiation center for the proposed DTV antenna is located 598 meters above ground level. The maximum DTV ERP is 230 kW. A conservative vertical plane relative field value of 0.1 (for angles below 60 degrees downward) is assumed for the antenna's downward radiation (see Sheet 2 of Figure 1). The calculated power density at a point 2 meters above ground level is 0.0002 mW/cm<sup>2</sup>. This is 0.04% of the FCC's recommended limit of 0.46 mW/cm<sup>2</sup> for DTV channel 50 for an "uncontrolled" environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the FCC'S RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with RFR warning signs. Furthermore, in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure.

---

Bainbridge, Georgia

Finally, it is noted that this technical exhibit only addresses the potential for radio frequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already has been provided to the FCC by the tower owner as part of the tower registration process.

If there are questions concerning the technical portion of this application, please contact the office of the undersigned.
