Declaration

I declare, under penalty of perjury, that I am a technical consultant to broadcasting and other communications systems, that I have over twenty-five years of experience in the engineering of broadcast and other communications systems, that I am familiar with the Federal Communications Commission's Rules found in the Code of Federal Regulations Title 47, that I am a Professional Engineer registered in North Carolina, that I have prepared or supervised the preparation of the attached Exhibit 15, Allocations, for Spirit Broadcasting Group, Inc., and that all of the facts therein, except for facts of which the Federal Communications Commission may take official notice, are true to the best of my knowledge and belief.

### Narrative

This Exhibit provides details of the allocations for the proposed modified facilities for WKRI, Cokesbury, South Carolina. This proposal complies fully with the requirements of 47 C.F.R. §73.509 for noncommercial reserved channels and §73.207 for nonreserved channels, with the exception of one nonreserved facility protected under the provisions of §73.215.

This application proposes the elimination of a directional antenna, and change to circular polarization. All studies use a “directional antenna” with full field at all azimuths.

### Allocations

This application proposes service to Cokesbury, South Carolina, on channel 220 as a Class C3 facility. The Allocations Table in this exhibit provides a list of the stations, construction permits, allocations, and applications studied. All are protected by this application.

An Allocations Study is included as Figure 1. Where there are facilities whose overlap is less than 3.2 kilometers (2 miles) additional figures are provided, along with the output tables from the computer program FMOVE. Those facilities are identified below.

Figure/Table	Facility ID	Community	Channel and Relationship
2	WLPE	Augusta, Georgia	219A, first adjacent
3	WLHR-FM CP	Lavonia, Georgia	221A, first adjacent
4	WLHR-FM (Licensed)	Lavonia, Georgia	221A, first adjacent

A nonreserved commercial channel spacings study is included as Figure 5. The minimum spacings for all first, second and third adjacent channel facilities, except for WLHR-FM CP and WLHR-FM (Licensed) are met at the proposed site. Figure 6 is a spacings study using the minimum spacings of §73.215.

### Protection of Nonreserved Facilities under §73.215

There is one station, with both licensed facilities and a construction permit, on nonreserved first adjacent channel 221 that is protected under the provisions of §73.215. Figure 3 is a contour protection study of the WLHR-FM (Licensed) facilities, where the studied facilities are the class maximum at the authorized coordinates. Figure 2 is a contour protection study of the WLHR-FM CP facilities. The WLHR-FM CP is authorized as a short spaced facility under §73.215, so is protected with its authorized facilities.

Table 1 lists nonreserved channel separations with the Required separation (utilizing rounding) and Margin for all facilities where the distances exceed the requirements of §73.207. For WLHR-FM CP and WLHR-FM (Licensed) the lack of overlap of contours distance is shown. The distance between the proposed WKRI site and each WLHR-FM site exceeds the §73.215(e) short spaced minimum of 72 kilometers for first adjacent Class A to Class C3 facilities.

### Source of Data

Transmitter location, effective radiated power, directional antenna pattern, and elevation data are extracted from the Commission's CDDBS. All contours for existing and proposed facilities are calculated using height above average terrain calculated at one degree horizontal increments. Terrain data is extracted from the V-Soft Communications NED 03

terrain database. The NED 03 database is derived from the USGS National Elevation Data 30 meter terrain database. The USGS National Elevation Dataset has been developed by merging the highest-resolution, best-quality elevation data available across the United States into a seamless raster format. NED is the result of the maturation of the USGS effort to provide 1:24,000-scale Digital Elevation Model (DEM) data for the conterminous US and 1:63,360-scale DEM data for Alaska.

All population data is from 2000 U.S. Census SF1 data files. Population is counted by considering the location of the centroid of each census bloc. The data for each block is counted if it falls within the area being counted.

### Area and Population

The area within the proposed 60 dBu F(50,50) service contour is calculated by a computer program which sums the areas within the contours based on 360 radials. The area of any significant water is then measured and subtracted. The resulting area is shown on a Figure at the end of this Exhibit. The population is calculated by the centroid method and is also listed on the Figure. Both authorized and proposed contours are shown.
