

Constructed Facility

As stated in our LPTV license application (File Number 0000001155), the transmitter output power as constructed is 1.26 kW, which is slightly different due to transmission line length, from the transmitter output power of 1 kW as authorized in the construction permit (File Number BDCCDTL-20131227ADT). There is no change in the maximum ERP of the station.

However, the Applicant noticed that the constructed TPO specified in the LPTV license application is not reflected in the LPTV license authorization granted on March 27, 2015. The Applicant hereby requests that the Commission grant this Class A license with the constructed TPO of 1.26 kW.
