

Environmental Statement
Kevin O’Kane
April, 2015

It is proposed to side-mount the antenna on an existing tower where there would no increase in height to the existing tower.

Using the pertinent formulas in OET Bulletin 65 and associated Supplement A, it has been determined that the proposed operation would not exceed RF exposure limits for controlled or uncontrolled access. Appropriate warning signs will be posted at the site and on the tower as necessary and in coordination with other users of the transmitter site, will reduce power or cease operation as necessary to protect persons having access to each site, transmitter or antenna from radio frequency electromagnetic exposure in excess of FCC guidelines.
