

WCTX, Schedule 381

Licensee submits information relevant to the questions asked by the Commission on Schedule 381. First, in addition to anything else listed on FCC Form 2100 Schedule 381, WCTX owns a single tube Thales/Comark CTT-U-CXIC1R 20 kW IOT transmitter as an emergency transmitter.

Second, all stations utilize mask filters as part of their transmitter systems. Additionally, certain stations use more than one amplifier -- in these instances, the station utilizes a combining system.

Combining systems are part of the station's antenna system. Stations with shared-use antenna systems use combining systems to allow energy to be delivered to the antenna without delivering significant RF levels to the transmitters of the other stations sharing the antenna.
