

## Statement Regarding RF Radiation

The applicant proposes to operate with 25 watts ERP horizontally at a height above ground of 8 meters with a Kathrein-Scala DVR 1 antenna on channel 9. This is a substantial reduction from the authorized ERP 3,000 watts. The authorized facilities meet the Commission's standards for both controlled and uncontrolled radiation exposure limits. With reduced power, this proposal is well within those exposure limits as well. Nevertheless, the applicant will ensure that there is appropriate signage warning of radiation hazard in and around the site at all times and that the station will cease transmissions in the event of any maintenance on the antenna support structure.
