

On May 27, 2015, KSWO Television Company, Inc. (“Licensee”) filed a construction permit application (File No. 0000001608) (“Correction Application”) to correct KSWO-TV’s coordinates to ensure that the Commission’s database accurately reflected the station’s operating facilities in light of the upcoming incentive auction. Because the correction of the geographic coordinates was 1 second in Latitude and 4 seconds in Longitude, the correction could not be made via a license modification application pursuant to Section 73.1690(c)(11) of the Commission’s rules.

The Correction Application required an update to the station’s Antenna Structure Registration which, in turn, required approval of the FAA. On May 29, 2015, Licensee filed a license to cover the Correction Application on paper (“License Application”), requesting waiver of 73.1690(b)(2) of the Commission’s rules, and such other rules and policies as necessary to allow for the grant of the License Application prior to the grant of the Correction Application, in order to meet the May 29, 2015 pre-auction licensing deadline for all full power and Class A licensees to modify their licenses to correct errors in the FCC database regarding their operating parameters and to have those modifications protected in the repacking process.

At the request of Commission staff, Licensee submits the instant electronic application to seek the grant of the License Application. As noted in the Correction Application, this modification only represented a coordinate correction, and no change in the operational facilities of the station. For that reason, Licensee respectfully requests that the Commission grant the License Application and related waivers so that the station’s operations will be protected in the upcoming incentive auction and any subsequent repacking of the television spectrum.
