

Comprehensive Engineering Statement

prepared for

OTA Broadcasting(HOU), LLC

KUGB-CD Houston, TX

Facility ID 66790

Channel 28 15 kW 506 m AMSL

KUGB-CD seeks Special Temporary Authority to operate at 70% power. The station uses an Italian-manufactured transmitter, which has no distributors in the United States. One of the transmitter's amplifier cabinets has failed, so that instead of operating at 4.0 kW TPO as licensed, current TPO is 2.8 kW.

Discussions with the manufacturer have begun, and alternative transmitters are being resourced. The station will either repair the existing transmitter or purchase a replacement. Installation of the new part or replacement transmitter will occur as soon as practicable.
