

AMENDMENT #2 to application 0000005087
Engineering Statement # 2
KBLM FI 38561

Amendment 2: Revises Antenna make, model and pattern tabulation only; adds this statement.

New antenna will be installed exactly as the previous antenna. Change of manufacturer to KAT and model to 4x1 K723147 array causes the necessity for new interference study; the within amendment passes the interference study limitations and shows compliance with applicable portions of §74.793. The full tabulation of the interference study is retained on file in this office for FCC review upon request.

The interference study must be run at terrain intervals of 0.5 km and population squares of 0.5 km/side.

The previous amendment which raised the antenna height above mean sea level remains effective and is thus retained with the application; this amendment is merely appended thereto.

Respectfully submitted,

B. W. St. Clair
Engineering Consultant
