

KABY-TV had to go silent when its tower did not pass an inspection. The tower had to be immediately deconstructed and removed from the site. KABY-TV is able to continue serving the majority of its viewers using a fiber feed to cable systems. While KABY-TV evaluates construction of a replacement tower, it requests authority to remain silent. KABY-TV went silent on January 5, 2016, however the LMS filing system will not allow that date to be entered into the electronic form.
