

**STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN APPLICATION FOR
CONSTRUCTION PERMIT
WDSI-TV - CHATTANOOGA, TENNESSEE
DTV - CH. 40 - 84 kW - 300 m HAAT**

Prepared for: NEW AGE MEDIA OF TENNESSEE LICENSE, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Professional Engineer in the Commonwealth of Virginia, License No. 7418, and in the State of New York, License No. 63418.

GENERAL

This office has been authorized by NEW AGE MEDIA OF TENNESSEE LICENSE, LLC, licensee of WDSI-TV, channel 40, licensed to Chattanooga, Tennessee, to prepare this statement, FCC Form 2100, and the associated technical exhibits in support of an application for construction permit to relocate the station's transmission facility to the WTVC tower support structure, FCC tower registration number 1235360. The distance between WDSI-TV's licensed site and the proposed site is 4.1 miles. The licensee proposes to side-mount a new Dielectric directional antenna, to be shared with WFLI-TV, channel 42. Both stations are co-located on a tower with FCC tower registration number 1042692, using separate antennas. The proposed antenna to be shared is a Dielectric Model TFU-17JSC/VP-R C170 directional elliptically polarized dual channel antenna. The proposed Effective Radiated Power (ERP) is 84 kW (19.25 dBk).

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 2

DIRECTIONAL ANTENNA

The applicant proposes to install the new Dielectric model TFU-17JSC/VP-R C170 elliptically polarized directional transmitting antenna with its center of radiation located at a height above ground of 51 meters, and a height above average terrain of 300 meters. The antenna manufacturer's horizontal plane azimuth patterns, illustrating the antenna's radiation characteristics as a function of direction, are shown for the horizontally polarized signal component in exhibit 1 and tabulated in exhibit 2, and for the vertically polarized signal component in exhibit 3 and tabulated in exhibit 4. The manufacturer's vertical plane elevation radiation pattern, illustrating the antenna's radiation characteristics above and below the horizontal plane, due to electrical beam tilt, is shown in Exhibits 5 and 6, and is tabulated in Exhibit 7.

PREDICTED COVERAGE CONTOURS

The predicted coverage contours were calculated in accordance with the method described in Section 73.625(b) of the Rules, utilizing the appropriate F(50,90) propagation curves (47 CFR Section 73.699, Figure 9), proposed Effective Radiated Power, and antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the NED Three Second US Terrain Database as permitted in the FCC Rules. The antenna site elevation and coordinates were determined from FCC antenna registration data. Exhibit 8 shows the predicted Noise Limited (41 dBu) contour, and the

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 3

principal community (48 dBu) contour. The 48 dBu contour completely encompasses the principal community of license, Chattanooga, Tennessee.

ALLOCATION CONSIDERATIONS

DTV Allocation Considerations

Compliance with Public Notice DA 13-618, which imposes limitations on the filing and processing of modification applications, is shown in exhibit 9. The proposed site will require the new antenna to be installed with its radiation centerline located at a lower Height Above Average Terrain (HAAT) of 300 meters compared to the HAAT of 350 meters at its existing site. The azimuth patterns of the proposed antenna was carefully crafted so that the proposed facility will be in compliance with DA 13-618.

To be certain that no new unacceptable interference will result from the proposed relocation a study was performed, using the Commission's application processing software, tv_process, to determine if the instant application for construction permit for WDSI-TV is predicted to cause any level of new prohibited interference to any domestic DTV stations, expansion construction permits, pending applications or DTV allotments. Results of the study indicate that the instant application is predicted to cause no impermissible level of new interference to the populations to be served by any domestic DTV station, expansion construction permit, pending DTV application or DTV allotment. See Appendix A.

Class A Television Allocation Considerations

As required in Section 73.616(f) of the FCC's Rules, a study was performed, using the FCC's application processing software. The study revealed that there are no Class A

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 4

LPTV stations with which WDSI-TV exhibits any spacing violation or contour overlap, nor is WDSI-TV predicted to cause any interference to any Class A LPTV station.

AM station considerations

The study also states that the "Proposed station is OK toward AM broadcast stations". There are no AM radio stations located within 3.2 km of the subject site.

BLANKETING AND INTERMODULATION INTERFERENCE

There will be three television broadcast facilities co-located at the WTVC site. There are three FM radio facilities located on other towers within the relevant distance of 315 meters. There are other broadcast and non-broadcast facilities located within 10 km of WTVC's site. The applicant does recognize its responsibility to remedy complaints of interference that might result from this proposal in accordance with applicable Rules.

RADIO FREQUENCY IMPACT

Effective October 15, 1997 the FCC adopted new guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions. The guidelines are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986) and by the American National Standards Institute and the Institute of Electrical and Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines define a maximum permissible exposure (MPE) level for occupational or "controlled" situations that apply in cases that affect the general public. The FCC Office of Engineering and Technology's technical

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 5

bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance to determine whether FCC-regulated transmitting facilities, operations or devices comply with guidelines for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. OET Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and guidelines.

The Maximum Permitted Exposure (MPE) level for broadcast facilities that operate on a frequency between 30 MHz and 300 MHz is 0.2 milliwatts per centimeter squared (mW/cm^2) for an "uncontrolled" environment, and is 1.0 milliwatts per centimeter squared (mW/cm^2) for a "controlled" environment. The MPE level for broadcast facilities that operate on a frequency between 300 MHz and 1500 MHz, primarily UHF TV stations, is determined for an "uncontrolled" environment by dividing the operating frequency in MHz by 1500, and is similarly determined for a "controlled" environment by dividing the operating frequency in MHz by 300.

The predicted emissions of WDSI-TV operating on channel 40 must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For WDSI-TV, which operates on television Channel 40 (626-632 MHz), the MPE is 0.419 milliwatts per centimeter squared (mW/cm^2) in an "uncontrolled" environment and 2.097 mW/cm^2 in a "controlled" environment. The proposed WDSI-TV facility will operate with a maximum ERP of 84 kW from an elliptically polarized directional transmitting antenna with a centerline height of 51 meters above ground level (AGL). Considering a very

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 6

conservative vertical plane relative field factor of 0.100, the WDSI-TV facility is predicted to produce a power density at two meters above ground level of 0.02337 mW/cm², which is 5.57% of the FCC guideline value for an "uncontrolled" environment, and 1.114% of the FCC's guideline value for "controlled" environments. Only three full-power DTV stations are to be located on WTVC's tower, however, there are two FM stations located on other towers that are within the relevant proximity of 315 meters. The total percentage of the ANSI value at the proposed site, including the cumulative radiation from all digital DTV stations, and FM stations, within the relevant proximity is 1033.53% of the limit applicable to "uncontrolled" environments, and 206.71% of the limit for "controlled" environments. The existing ANSI value at the proposed site is 993.77% of the limit applicable to "uncontrolled" environments, and 198.75% of the limit for "controlled" environments.

The existing contribution of WTVC only at the site is 11.93% of the limit applicable to "uncontrolled" environments, and 2.39% of the limit for "controlled" environments. When the two proposed DTV stations are added to the WTVC tower the total ANSI value at the tower becomes 51.68% of the limit applicable to "uncontrolled" environments, and 10.34% of the limit for "controlled" environments.

Access to the transmitting site is restricted to authorized personnel and is appropriately marked with RFR warning signs. A site protocol is in effect to ensure that appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure.

STATEMENT OF JOHN E. HIDLE, P.E.

WDSI-TV - Chattanooga, Tennessee

PAGE 7

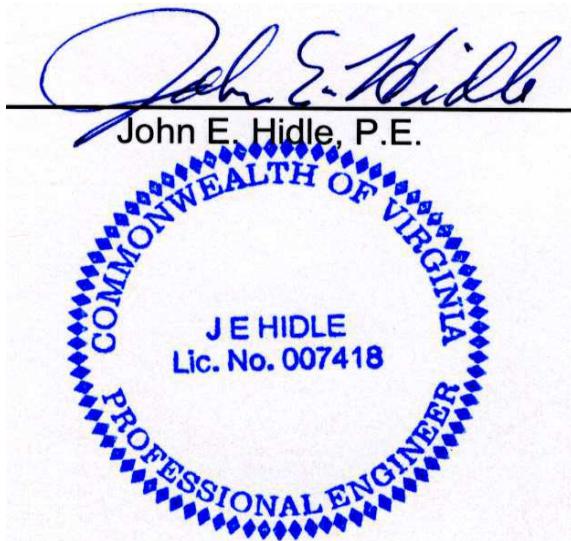

OCCUPATIONAL SAFETY

The licensee of WDSI-TV is committed to the protection of station personnel and/or tower contractors working in the vicinity of the WDSI-TV antenna, and is committed to reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

SUMMARY

It is submitted that the instant application for construction permit to relocate WDSI-TV's transmission facility, as described herein, complies with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement, FCC Form 2100, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.
