

Explanation of ERP

The power listed in the Antenna Data Effective Radiated Power ("ERP") Section of this Amendment to the W20AB Minor Change Application is 0.1 kW. This is the lowest possible power allowed to be entered by the Licensing and Management System ("LMS") software. However, the actual ERP is 0.0037 kW or 3.7 watts. The 3.7 watt ERP level maintains the digital coverage within the existing analog coverage of W20AB. The directional antenna used in this amendment maintains coverage over the city of license.
