Engineering Statement In Support Of An Application To Modify Pending Application BDISDTL20081105ADS

BACKGROUND

This is an amendment to the displacement application for Station KSGA-LP, from Channel 64 to Channel 30, as a result of the displacement of broadcast stations operating on 700 MHz channels, including Channel 64. The amendment requests a change in the location of the proposed transmitter site. While the application, as initially filed, requested a change in transmitter site more than 48 km in distance from the Station's current community of license, this amendment proposes a different transmitter site that is within 41.5 km of the Station's community of license and is, therefore, a permitted change in transmitter site.

As this is a displacement application it appears that the provisions of §74.787(a)(4) apply. This paragraph limits a change of location associated with a displacement application to no more than 30 miles (48 km) from the reference coordinates of station's "Community of License".

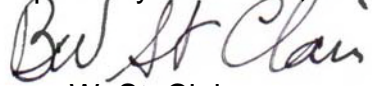

DISCUSSION

The "Community of License" in this application is San Bernardino, CA. The coordinates for this community in §76.53 are 34-06-30, 117-17-28. The coordinates of the new site (Tower #1026311) are 34-08-33, 117-43-20. The distance of the proposed move is 30.9 km, within the allowed distance of 48 km.

CONCLUSION

The proposed relocation of the transmitting site is less than the maximum allowed distance of 48 km from the "Community of License" specified in §74.787(a) (4) and meets the requirements of this section.

Respectfully submitted,
