

ENVIRONMENTAL AND RADIO FREQUENCY SAFETY

The licensee of WCHS-TV is committed to the protection of station personnel and/or tower contractors working in the vicinity of the WCHS-TV antenna, and is committed to reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

The predicted emissions of WCHS-TV must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For WCHS-TV, which will operate on television Channel 29 (560-566 MHZ), the MPE is 375.33 microwatts per centimeter squared (µW/cm²) in an "uncontrolled" environment and 1,876.7 µW/cm² in a "controlled" environment. The proposed WCHS-TV facility will operate with a maximum ERP of 373 kW from a horizontally polarized omni-directional transmitting antenna with a centerline height of 432.1 meters above ground level (AGL). Considering a conservative predicted vertical plane relative field factor of 0.300 the WCHS-TV facility is predicted to produce a power density at two meters above ground level of 6.063 µW/cm², which is 1.62% of the FCC guideline value for an "uncontrolled" environment, and 0.324% of the FCC's guideline value for "controlled" environments. There is one other full-power DTV facility, one LPTV DTV facility and one FM radio station that are located at the WCHS-TV site. The total estimated percentage of the ANSI value at the proposed site, including the cumulative radiation from all authorizations located within the relevant proximity, is 26.82% of the limit applicable to "uncontrolled" environments, and 5.364% of the limit for "controlled" environments. (See Appendix A)

SUMMARY OF RADIOFREQUENCY

RADIATION STUDY
WCHS-TV, Charleston, WV
Channel 29, 373 kW, 514.1m HAAT
May, 2017

PERCENT OF	UNCONTROLLED	LIMIT	1.62%	2.44%	22.16%	0.61%
UNCONTROLLED	LIMIT	(µW/cm²)	375.33	355.33	343.33	200.00
PREDICTED	POWER DENSITY	(µW/cm²)	6.063	8.664	76.072	1.220
