ENGINEERING REPORT

WOPI-CD, Bristol (VA)/Kingsport (TN) Re-Assignment Minor Change for TV Channel 11

ENGINEERING STATEMENT

1. This is an instant application for the initial 90-day "Checklist" application that specifies the reassignment of WOPI-CD, Bristol (VA)/Kingsport (TN) to TV Channel 11 (from Channel 9). The baseline facilities are proposed. The antenna is unchanged by this proposal; however, because the antenna description in the FCC Antenna Database is incorrect (Antenna ID No. 116413), the licensed Antenna ID is not used. The relative field values have been re-entered exactly with a more valid description for the antenna.

2. The proposed facility causes no extension of the predicted service area relative to the baseline reassignment facility of the FCC's Closing and Channel Reassignment ("CCR") Public Notice (beyond the allowable one percent for any radial direction). Also, the proposed facility is compliant with the 95 percent population service requirement of the CCR baseline facility.

3. This application includes a map showing the 48 dBu contour. (All contours are based on USGS three arc-second data and 72 evenly-spaced azimuths.)
