

## Exhibit 1

### KKEI-CD Repack Channel Change Application

#### Construction Permit Certifications / Environmental Effect

The transmitter facility is one that is shared by multiple full power TV and FM radio broadcasters for over two decades. It is owned by Sander Operating Co. LLC and managed by Skyline Tower LLC.

Access to the site by the general public is not permitted by the site owner / manager. The site is secured by two 10 foot tall chain link fences and equipped with tamper detection equipment as well as 24/7 video surveillance of the entire property, buildings, and tower structure. Access by authorized personnel is controlled by a card lock system which is also monitored 24/7. The card lock system will only allow access to those portions of the buildings where access is required to perform normal maintenance duties. Access to the tower structure is further restricted to only approved tower company personnel who have received the proper training in RF exposure issues and regulations.

RF exposure level measurements are conducted annually by the tower owner to ensure compliance with all applicable FCC and ANSI guidelines. Re: potential RF exposure levels to the general public and maintenance personnel.

All users of the facilities have agreed to either reduce power or cease operation in the event maintenance work must be performed in order to prevent exposure in excess of FCC guidelines.

All such work must further be approved in advance by site owners/managers and coordinated with the site manager who is present at the site during regular business hours.
