

**RF Exposure Statement
KTVD Denver, CO
Repacked Channel 31**

The facility proposed in this application is essentially identical, with the exception a small reduction in power from 1,000 kW to 960 kW to account for a small variation in the antenna pattern, to the replicated post Incentive Auction facility described in the repacking notification sent to the station. In that the facility replicates the currently authorized facility that was previously determined to be within the RF exposure limit requirements, the proposed facility is also expected to comply with the requirements. A computation of the worst-case scenario indicates that the RF exposure would be less than 5.0% of allowable limit for uncontrolled areas. All other current safeguards related to the site with regard to both workers and the general public will remain in place.
