

## ENGINEERING EXHIBIT

### **Incentive Auction Channel Reassignment**

#### **Application for Digital Television Station Construction Permit**

prepared for

**University Of North Carolina**  
WUNL-TV Winston-Salem, NC  
Facility ID 69360  
Ch. 33 630 kW 501 m

*University Of North Carolina (“UNC”)* is the licensee of digital television station WUNL-TV, Channel 32, Facility ID 69360, Winston-Salem, NC. *UNC* herein proposes construction of the WUNL-TV post-auction facility on Channel 33. Reassignment of WUNL-TV from Channel 32 to Channel 33 was specified in the *Incentive Auction Closing and Channel Reassignment Public Notice* (“CCRPN”, DA 17-317, released April 13, 2017).

The proposed Channel 33 operation will employ a new antenna system to be top-mounted on the WUNL-TV tower in lieu of the existing Channel 32 antenna. The existing tower structure corresponds to FCC Antenna Structure Registration (“ASR”) number 1014577. The proposed Channel 33 antenna has a longer length than the existing Channel 32 antenna. The structure’s overall height will increase by 1.9 meters to 108.9 meters above ground level. The FAA has been notified of the proposed height increase (2017-ASO-13913-OE) and upon receipt of an FAA Determination of No Hazard an application to modify the FCC ASR will be submitted. At that time an amendment will be supplied to this application to supply the ASR number.<sup>1</sup>

The proposed antenna is an elliptically polarized directional Dielectric model TFU-19JSC/VP-R-C170 (33.3 percent vertical polarization). *UNC* proposes to operate WUNL-TV with an effective radiated power (“ERP”) of 630 kW at 501 meters antenna height above average terrain (“HAAT”). The maximum horizontally polarized ERP is 630 kW and the maximum

---

<sup>1</sup>As discussed with FCC staff, the ASR number is omitted on the accompanying Form 2100 because the LMS electronic filing system automatically pre-fills the overall structure height from ASR data, which presently is set to the existing height of 107.0 meters AGL. By omitting the ASR number, the proposed overall height can be entered on the form.

vertically polarized ERP is 210 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. The directional antenna's azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively. The antenna's elevation pattern is depicted in Figure 2.

A map is supplied as Figure 3 which depicts the standard predicted coverage contours. This map includes the location of Winston-Salem, WUNL-TV's principal community. As demonstrated thereon, the proposed facility complies with §73.625(a)(1) as the entire principal community will be encompassed by the 48 dB $\mu$  contour.

The proposed noise limited service contour ("NLSC") extends beyond that of the *CCRPN* parameters of 587 kW ERP and 499 meters HAAT.<sup>2</sup> The proposal complies with §73.3700(b)(1)(ii) as described in the following.

The *CCRPN* facility specifies the directional antenna pattern corresponding to WUNL-TV's licensed Channel 32 facility. The antenna manufacturer cannot provide the exact pattern on the new channel due to the change in frequency and corresponding mechanical limitations of antenna construction. The directional pattern proposed herein replicates the reassignment pattern as closely as possible. The proposal results in a slightly larger coverage contour in some directions in an attempt to achieve the *CCRPN* coverage contour. Therefore, WUNL-TV qualifies under §73.3700(b)(1)(ii)(A) for a contour extension due to the loss of coverage area resulting from the new channel assignment.

Interference study per FCC OET Bulletin 69<sup>3</sup> shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby post-auction full service and

---

<sup>2</sup>The antenna height above ground and above mean sea level increased by 0.4 meters from licensed values. The proposed WUNL-TV antenna HAAT is recalculated to be 501.3 meters, based on FCC 30 meter terrain data developed by OET.

<sup>3</sup>FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 2 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

Class A television stations and reassessments as required by §73.616. The interference study output report is provided as Table 1. This satisfies §73.3700(b)(1)(ii)(C) for the proposed NLSC extension.

The amount of NLSC extension does not exceed one percent in any direction. Figure 4 supplies a coverage contour comparison of the proposed WUNL-TV facility to the reassignment facility's contour and a one percent extension distance of the reassignment facility's contour. Here, the contour level is adjusted with the dipole factor to match FCC application processing. Table 1's results also demonstrate that the proposed contour is within the baseline contour plus one percent. Therefore the proposed contour extension complies with §73.3700(b)(1)(ii)(B).

The proposed WUNL-TV facility's terrain-limited population provides a 101.6 percent match of the CCRPN baseline facility, as detailed in the following table. The OET Bulletin 69 report summary in Table 1 also concludes that the proposed service area population is more than 95 percent of the baseline population.

Terrain Limited Population - Match of Reassignment		
Population Summary (2010 Census) OET Bulletin 69: TVStudy	Reassignment Parameters	Proposed
Within Noise Limited Contour	2,614,144	2,660,624
Not affected by terrain losses	2,541,314	2,581,924
Match of Reassignment	---	<b>101.60%</b>

The proposed 630 kW ERP exceeds the maximum allowed for the proposed antenna HAAT of 501 meters permitted by §73.622(f)(8)(i). Section 73.622(f)(5) permits the maximum ERP to be exceeded in order to provide the same geographic coverage area as the largest station within the same market. As demonstrated in Figure 5, the total area within the proposed WUNL-TV NLSC is 32,714 square kilometers, which does not exceed the NLSC area of WFMY-TV (44,324 sq. km, Ch. 51, Greensboro NC, BLCDT-20050628AAB). Thus, the 630 kW ERP specified herein is in compliance with §73.622(f)(5) of the FCC's Rules.

The nearest FCC monitoring station is 440 km distant at Laurel, MD. This exceeds by a large margin the threshold minimum distance specified in §73.1030(c)(3) that would suggest consideration of the monitoring station. The site is not located within the areas requiring

coordination with “quiet” zones specified in §73.1030(a) and (b). The site location is beyond the border areas requiring international coordination. There are no authorized AM stations within 3 kilometers of the site.

### **Human Exposure to Radiofrequency Electromagnetic Field (Environmental)**

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC’s OET Bulletin Number 65. Based on OET-65 equation (10), and considering 7 percent antenna relative field in downward elevations (pattern data shows less than 7 percent relative field at angles 45 to 90 degrees below the antenna), the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is  $13.9 \mu\text{W/cm}^2$ , which is 3.6 percent of the general population/uncontrolled maximum permitted exposure limit. This is below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal’s contribution is less than five percent.

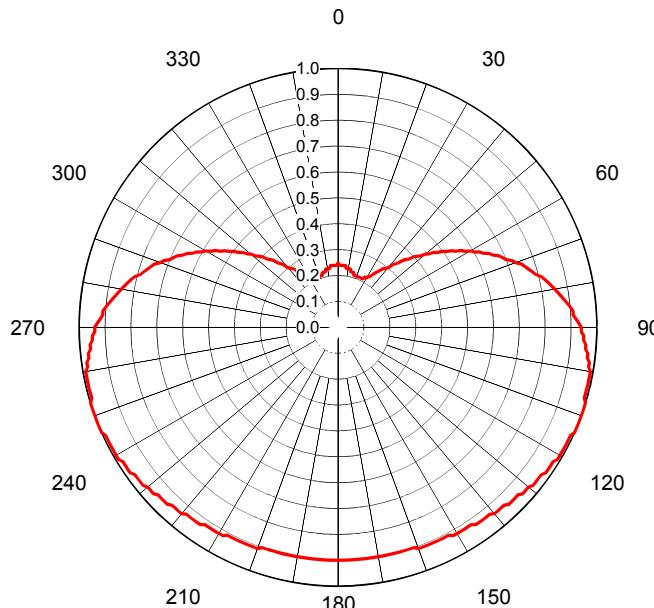

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC’s guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

Channel and Facility Information	Section	Question	Response
	Proposed Community of License	Facility ID	69360
		State	North Carolina
		City	WINSTON-SALEM
		DTV Channel	33
	Facility Type	Facility Type	Noncommercial Educational
		Station Type	Main
	Zone	Zone	2

Antenna Location Data	Section	Question	Response
	Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	No
		ASR Number	
	Coordinates (NAD83)	Latitude	36° 22' 31.7" N+
		Longitude	080° 22' 17.5" W-
		Structure Type	GTOWER-Guyed Structure Used for Communication Purposes
		Overall Structure Height	108.9 meters
		Support Structure Height	95.1 meters
		Ground Elevation (AMSL)	719.0 meters
	Antenna Data	Height of Radiation Center Above Ground Level	101.4 meters
		Height of Radiation Center Above Average Terrain	501.3 meters
		Height of Radiation Center Above Mean Sea Level	820.4 meters
		Effective Radiated Power	630 kW

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Directional Custom
		Do you have an Antenna ID?	No
		Antenna ID	
	Antenna Manufacturer and Model	Manufacturer:	DIE
		Model	TFU-19JSC/VP-R-C170
		Rotation	0 degrees
		Electrical Beam Tilt	0.75
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
		Polarization	Elliptical
	DTV and DTS: Elevation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data

#### Additional Azimuths

Degree	V <sub>A</sub>
--------	----------------

<b>Construction Permit Certifications</b>	<b>Section</b>	<b>Question</b>	<b>Response</b>
	<b>Post-Incentive Auction Expedited Processing</b>	<p>It will operate on the DTV channel for this station as established in the post-incentive auction channel reassignment public notice.</p> <p>It will operate post-incentive auction facilities that do not expand the noise-limited service contour in any direction beyond that established by the post-incentive auction channel reassignment public notice.</p> <p>It will operate post-incentive auction facilities that match or reduce by no more than five percent with respect to predicted population from those defined in the post-incentive auction channel reassignment public notice.</p> <p>The antenna structure to be used by this facility has been registered by the Commission and will not require re-registration to support the proposed antenna, OR the FAA has previously determined that the proposed structure will not adversely affect safety in air navigation and this structure qualifies for later registration under the Commission's phased registration plan, OR the proposed installation on this structure does not require notification to the FAA pursuant to 47 C.F.R. Section 17.7.</p>	Yes  No  Yes  No
	<b>Environmental Effect</b>	Would a Commission grant of Authorization for this location be an action which may have a significant environmental effect? (See Section 1.1306 of 47 C.F.R.)	No
	<b>Broadcast Facility</b>	The proposed facility complies with the applicable engineering standards and assignment requirements of 47 C.F.R. Sections 73.616, 73.622(i), 73.623(e), 73.625, 73.1030, and 73.1125.	Yes
