

WGTB-CD

Exhibit #1

Environmental Effects

The radiation center for the proposed DTV antenna is located 400 meters above ground level. The maximum DTV ERP is 1.27KW (Horizontal Polarization).

Public access to the transmitting site is restricted and appropriately marked with RFR warning signs. Furthermore, a protocol is in effect in the event that workers or other authorized personnel enter the restricted area or climb the tower. This protocol ensures that appropriate measures are taken to guarantee worker safety with respect to radio frequency radiation exposure in excess of FCC guidelines. Such measures include reducing the average exposure by spreading out the work over a longer period of time and wearing acceptable RFR protective clothing.
