

RE: Interference Explanation for K40LH-D

The Utah plan works in a daisy chain thus forcing an A-B plan.

The A Bank consists of channels 14 to 24. The B Bank of channels consists of 26 to 36.

The requested new channel for K40LH-D is 23.

Channel 23 will show interference to the current K23KR-D at Alton.

So, there will be another displacement application for K23KR-D to go to channel 33.

Even though K23KR-D is not displaced it will be necessary for it to move to 33 for the A-B plan to work, thus, keeping service to these rural residents.

Please see attached plan with call signs circled.

Respectfully,

Mauri Parsons
