

RE: Interference Explanation for K23KR-D

The Utah plan works in a daisy chain thus forcing an A-B plan.

The A Bank consists of channels 14 to 24. The B Bank of channels consists of 26 to 36.

The requested new channel for K23KR-D is 33, otherwise it will show conflict with the new proposed channel 23 at Orderville.

Even though K23KR-D is not displaced it will be necessary for it to move to 33 for the A-B plan to work, thus, keeping service to these rural residents.

Please see attached plan with call signs circled.

Respectfully,

Mauri Parsons
