

ENVIRONMENTAL ASSESSMENT

C.F.R 47 Section 1.1306

K42FX-D Hobbs, NM Facility ID 130381

A minor change to the existing facility is requested to obtain a replacement core television channel to continue public television service being displaced by the incentive auction.

The proposed minor change in this application will use the existing equipment shelter and tower structures. The site is located in an unpopulated area some distance from activities of the general public, and access to the site is restricted by a locked chain link gate and security fence.

There will be no increase in the effective radiated power or maximum permitted exposure to radiated electrical or magnetic fields to the general public or occupational workers.

Therefore, no significant impact or change to the environment is anticipated.
