

RE: Interference Explanation for K25KN-D

The Utah plan works in a daisy chain thus forcing an A-B plan.

The A Bank consists of channels 14 to 24. The B Bank of channels consists of 26 to 36.

The requested new channel for K25KN-D is 30, otherwise it cannot be received at the Orderville site because it will be adjacent to the new channel 24.

Even though K25KN-D is not displaced it will be necessary for it to move to 30 for the A-B plan to work, thus, keeping service to these rural residents.

Please see attached plan.

Respectfully,

Mauri Parsons
