

Purpose of Amendment

The purpose of this amendment is to address issues raised by the Commission in its August 9, 2017 deficiency letter with respect to whether antenna structure registration is required and to reflect a directional rather than nondirectional antenna, to resolve the issue of the proposed coverage exceeding the post-auction reassignment parameters by more than 1%.

With regard to the antenna structure registration issues, the antenna will be mounted on the existing approximately 8.5 foot pole on the rooftop of a building, with an antenna center of radiation of 11.5 feet above the rooftop and a proposed antenna with a vertical height of 16.7 feet, resulting in an overall height of the proposed antenna as mounted on the pole of about 19.85 feet above the rooftop; since the overall height would not extend more than 20 feet above the existing building's rooftop, antenna structure registration should not be required.
