

RF HAZARD STATEMENT
REQUEST FOR SPECIAL TEMPORARY AUTHORITY (STA)
TELEVISION STATION KIDK(TV)
(FACILITY ID NO. 56028)
IDAHO FALLS, IDAHO
CHANNEL 36

The KIDK STA facility was evaluated for RF exposure at 2 m above ground level using the procedures outlined in FCC OET Bulletin No. 65, *Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields*. The results indicated that the exposure to RF energy at 2 m above ground level at base of the KIDK tower supporting structure and surrounding areas will not exceed approximately 4.0% of the FCC's limit for occupational / controlled exposure levels.

The transmitter site is inaccessible to the public due to its remote location, the presence of gates, and RF hazard signage. Access to the site is limited only to authorized personnel that are aware of the RF exposure environment. Based on these factors, the KIDK transmitter site is considered a 'controlled environment' for RF hazard evaluation purposes.

The licensee, in coordination with the other users of the transmission facility, shall reduce power or cease operation as necessary to protect persons having access to the tower or antenna from RF energy in excess of FCC guidelines.
