Donald G. Everist, being duly sworn upon his oath, deposes and states that:

He is a graduate electrical engineer, a Registered Professional Engineer in the District of Columbia, and is President, Secretary and Treasurer of Cohen, Dippell and Everist, P.C., Consulting Engineers, Radio - Television, with offices at 1420 N Street, N.W., Suite One, Washington, D.C. 20005;

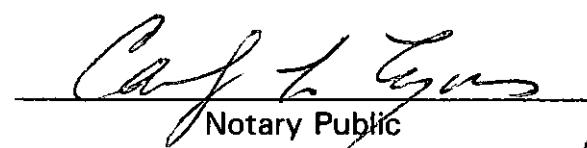

That his qualifications are a matter of record in the Federal Communications Commission;

That the attached engineering report was prepared by him or under his supervision and direction and

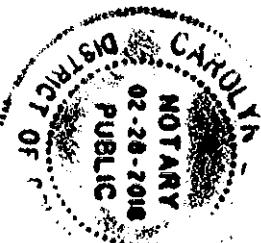

That the facts stated herein are true of his own knowledge, except such facts as are stated to be on information and belief, and as to such facts he believes them to be true.

  
Donald G. Everist  
District of Columbia  
Professional Engineer  
Registration No. 5714

Subscribed and sworn to before me this 13<sup>th</sup> day of September, 2017.

ENGINEERING STATEMENT  
WMYO-DT, SALEM, INDIANA

PAGE 1

This engineering statement has been prepared in support of an application to modify construction permit (FCC File No. 0000028600) for repacked facilities on Channel 16 pursuant to DA 17-314 in accordance with the FCC Public Notice dated July 31, 2017 (DA 17-724). This engineering statement is on behalf of Independence Television Company, licensee of WMYO-DT, Salem, Indiana. The purpose of the application is to increase effective radiated power in order to help maintain the unique coverage attained from the current licensed non-directional diplexed antenna. Absent grant of this application, the station is predicted to experience a loss of population served in excess of one percent as a result of the repacking process. See *Incentive Auction Closing and Channel Reassignment Public Notice: The Broadcast Television Incentive Auction Closes: Reverse Auction and Forward Auction Results Announced*: Public Notice, 32 FCC Rcd 2786 (2017) at 2804, para. 56, with link to [https://fcc.gov/download/incentive-auctions/Transition\\_Files](https://fcc.gov/download/incentive-auctions/Transition_Files) that includes an indication of stations with reassessments that satisfy this criteria, including WMYO-DT.

Present

WMYO-DT operates on Channel 51 and its sister station WDRB-DT operates on Channel 49. The separation of only 2 channels permitted the stations to use a top-mounted single non-directional antenna thereby taking advantage of a maximum-unaltered radiation pattern.

Incentive Auction Channel Assignment and Effect On The Constraints on Coverage

The Incentive Auction technical technique did not take this important allocation fact into consideration when it assigned WDRB-DT Channel 32 and WMYO-DT Channel 16. As discussed above, WMYO-DT, Channel 16 is in the list entitled, “Greater Than 1% Population Loss” last

updated April 13, 2017 which demonstrates that the coverage determined by the reassignment channel and ERP reduced the actual service area by more than one percent.

Given the time constraints, WDRB-DT and WMYO-DT undertook an allocation analysis to determine if WDRB's channel could be modified to permit a replacement diphased single antenna<sup>1</sup>. Based on this analysis, using TVStudy 2.2, no alternate channel was identified which would permit maximum equivalent coverage enjoyed by the current WMYO-DT 1000 kW non-directional 390.4 meter HAAT operation to off-the-air viewers. Accordingly, due to the new channel separation, a unique single antenna solution is not possible under current antenna design criteria. Therefore, other less perfect transmitter antenna techniques were examined. The least disruptive antenna arrangement is to modify the existing tower top to create a "T" bar. The "T" bar will be designed to handle both the Channel 32 and 16 antennas and will be designed to minimize the modification of either antenna radiation pattern.

As detailed in the WMYO-DT FCC Form 2100, Section 399, after conducting several structural analyses of the existing tower, the station has concluded that the facilities proposed by the FCC cannot be constructed on the current tower. Instead, the station plan to construct a new tower of the same basic height and dimensions as the existing tower on the same property.

WMYO-DT proposes to construct DTV facilities of 725 kW horizontal polarization/ 217.5 kW vertical non-directional at a height above average terrain of 390.4 meters.

---

<sup>1</sup>Of a design that meets industry acceptance offered by major domestic antenna manufacturer

Cohen, Dippell and Everist, P.C.

Transmitter Site and Equipment Data

There are no AM stations located within 3.2 km of the proposed WMYO-DT tower site.

There are no FM operations and there is one other full-service DTV facility, WDRB-DT, within 100 meters.

For purposes of this application, the proposed DTV antenna will be top-mounted on the existing tower. The construction permit will be modified to reflect the new tower once all detailed information about the new site on the existing property is available. Accordingly, for purposes of this application, the WMYO-DT proposed antenna will be located on the existing tower having a total overall structure height above ground of 304.8 meters (1000 feet). The existing transmitter site is located at 5257 South Skyline Drive, Floyds Knob, Indiana. The registration number for the tower is 1028421.

Since there is no change in overall height, FAA airspace approval is not required.

Exhibit E-1 is a vertical sketch of the existing tower and the proposed transmitting antenna configuration.

The geographic coordinates of the existing site are as follows:

North Latitude:  $38^{\circ} 21' 00''$

West Longitude:  $85^{\circ} 50' 57''$

NAD-27

North Latitude:  $38^{\circ} 21' 00''$

West Longitude:  $85^{\circ} 50' 57''$

NAD-83

PAGE 4

Equipment Data

- Antenna: ERI, Model ATW21H3-ETO-16H (or equivalent) elliptically polarized antenna with 0.75° electrical beam tilt. The vertical plane pattern and other exhibits required by Section 73.625(c) are herein included as Exhibit E-2.
- Transmission Line: 350.6 meters (1150 ft) of ERI, Type EIA rigid, 7-3/16", 75 ohm or equivalent with loss of 0.276 dB/100 feet

Power Data

Transmitter output		58.22 kW	17.65 dBk
Transmission line efficiency/loss		80.06%	0.966 dB
Input power to the antenna		46.61 kW	16.68 dBk
Antenna power gain, Main Lobe	Horizontal	15.56	11.92 dB
	Vertical	4.67	6.69 dB
Effective Radiated Power,	Horizontal	725 kW	28.60 dBk
	Vertical	217.5 kW	23.37 dBk

Elevation Data

Vertical dimension for Channel WMYO-DT antenna		15.3 meters 50.1 feet
Overall height above ground of the existing antenna structure (including beacon and lightning rod)		304.8 meters 1000 feet
Center of radiation of Channel 16 antenna above ground		296 meters 971 feet
Elevation of site above mean sea level		292.9 meters 961 feet

Center of radiation of Channel 16 antenna above mean sea level	588.9 meters 1932 feet
Overall height above mean sea level of existing tower and proposed antenna (including beacon)	597.7 meters 1961 feet
Antenna height above average terrain	390.4 meters 1280.8 feet

Note: Slight height differences may result due to conversion to metric.

Coverage

The average elevation data for 3.2 to 16.1 km along each radial are based upon the 3-second NGDC profile data and conforms very closely to the terrain information of that determined by using the 7.5 minute topographic maps on file at the Commission and has been previously established. For this filing, the one second terrain data and prediction of coverage contours are based solely on TVStudy 2.2.

Table I provides the F(50,90) DTV coverage contour has been computed every ten degrees in azimuth from reference TVStudy 2.2 which represents the propagation data for Channels 14-69, as published by the FCC in Figure 10b and Figure 10c, Section 73.699 of the FCC Rules and Regulations.

Utilizing the formula in Section 73.625(b)(2) of the Rules for the effective heights, it is found that the depression angle,  $A_h$ , varies from 0.503 to 0.595 degrees. Since the relative vertical field is greater than 90% of the maximum at these depression angles, the maximum power was used in determining the distance to the DTV contour.

Table I includes the distances to the 48 and 38.937 dBu F(50,90) coverage contours, the average elevation 3.2 to 16.1 km, and the antenna height above average terrain for each of the ten degree spaced radials. Exhibit E-4 provides the 48 and 38.937 dBu F(50,90) coverage contours and demonstrates that the community of license is covered by the F(50,90) 48 dBu contour.

Total Radiofrequency Field Levels at WDRB-DT Tower Site

The total contribution by the proposed WDRB-DT broadcast facilities and the addition of the proposed operation of WMYO-DT at 2 meters above ground level is less than two percent of the current FCC guidelines for uncontrolled/general population exposure.

For DTV operation, WDRB-DT proposes to use an ERI, Type ATW 21H3-ETO-16H or equivalent antenna. The elevation pattern for this antenna shows a maximum relative field of less than 0.067 towards the ground in the vicinity of the tower.

The total percentage of radiofrequency field levels (“RFF”) can be calculated by combining the percentage contribution of each station.

<u>Station</u>	<u>ERP</u> (kW)	<u>Frequenc</u> y(MHz)	<u>Ch</u>	<u>RCAGL</u> (m)	<u>Relative Field</u> 20°-90°	<u>S</u> ( $\mu$ W/cm <sup>2</sup> )	<u>RFF</u> (%)
WMYO-DT Proposed	725H 217.5	482-488	16	296	0.067	1.64	<1
WDRB-DT Proposed	724H 217.2V	578-584	32	296	0.043	0.672	<1

Using this relative field factor and the procedures prescribed in OET Bulletin 65, the maximum RFF resulting from the proposed operation is less than 2  $\mu$ W/cm<sup>2</sup>. This is less than one

percent of the 323  $\mu\text{W}/\text{cm}^2$  maximum human exposure to RFF recommended by the current FCC guidelines for the uncontrolled/general population.

Authorized personnel and rigging contractors will be alerted to the potential zone of high field levels on the tower, and if necessary, the station will operate with reduced power or terminate the operation of the transmitter as appropriate when it is necessary for authorized personnel or contractors to perform work on the tower. Workers and the general public, therefore, will not be subjected to RFF levels in excess of the current FCC guidelines.

#### Environmental Assessment

An environmental assessment (“EA”) is categorically excluded under Section 1.1306 of the FCC Rules and Regulations as the tower was constructed prior to the requirements specified in WT Docket No. 03-128 and the licensee indicates:

- (a)(1) The existing\* tower is not located in an officially designated wilderness area.
- (a)(2) The existing\* tower is not located in an officially designated wildlife preserve.
- (a)(3) The proposed facilities on an existing\* tower will not affect any listed threatened or endangered species or habitats.
- (a)(3)(ii) The proposed facilities on an existing\* tower will not jeopardize the continued existence of any proposed endangered or threatened species or likely to result in the destruction or adverse modification of proposed critical habitats.
- (a)(4) The proposed facilities on an existing\* tower located on a tower which was built prior to the adoption of WT Docket No. 03-128 and is grandfathered and has not affected any known districts, sites, buildings, structures, or objects significant in American history, architecture, archaeology, engineering, or culture.
- (a)(5) The existing\* tower is not located near any known Indian religious sites.

Cohen, Dippell and Everist, P.C.

ENGINEERING STATEMENT  
WMYO-DT, SALEM, INDIANA

PAGE 8

- (a)(6) The existing\* tower is not located in a flood plain.
- (a)(7) The installation of the DTV facilities on an existing guyed tower will not involve a significant change in surface features of the ground in the vicinity of the tower.
- (a)(8) It is not proposed to equip the tower with high intensity white lights unless required by the FAA.
- (b) Workers and the general public will not be subjected to RFF levels in excess of the current FCC guidelines contained in OET Bulletin No. 65, Edition 97-01, dated August 1997 and Supplement A.

\*WMYO-DT will obtain all required approvals as needed for any new tower construction.

Windload Data <sup>3</sup> :	EPA	No Ice	66.0 sq.ft.
		0.5inch (13 mm) ice	135.7 sq.ft. (6.13 sq.m.)
Effective Moment Arm <sup>3</sup> :	EPA	No Ice	27.7 feet (12.61 sq.m.)
		0.5inch (13 mm) ice	27.1 feet (8.45 meters)
			(8.25 meters)

**MOUNTING FLANGE BOLT CIRCLE<sup>2</sup>:** Quantity (16), 1.38 inch holes for 1.25 inch bolts, equally spaced on a 21.50 inch bolt circle.

**This antenna is designed to be supported by a structure that can resist the antenna base reactions and which provides a support that is rigid in the three translational and three rotational degrees of freedom.**

1 Please note, the listed weights and effective wind areas are based on the PRELIMINARY design of the antenna. Final As-Built values for the antenna are typically within +/-10% of the Preliminary design values, and will be provided in the technical manual that accompanies the antenna. Specified loads include the antenna, beacon and lightning spurs only. Custom mounting brackets/adapters and/or antenna input section are NOT included.

2 The mounting flange specified is the standard ERI mounting flange used for this antenna configuration. In those instances where an existing top mounted antenna is being replaced the antenna supplied will be designed with a mounting flange to match that of the existing antenna unless electrical and /or mechanical requirements for the new antenna preclude the matching flange. Customer responsible for supplying verified flange requirements for the flange configuration being matched.

3 Based on a wind speed of 90miles per hour MPH (145 kph) (fastest mile) no ice and 30 MPH (48 kph) with 0.75-inches in base design ice (2.1-inches actual tiz) with a height above ground level (HAGL) of 971 feet (296m) per ANSI/TIA-222-G. Structure Class II, Exposure Category C and Topographic Category I. EPA values include four lightning spurs & a standard beacon.

**NOTE: The purchaser or their representative shall be required to contact the tower owner, state and/or local building officials for specific design requirements and suitable parameters for a particular structure. Any variation from the parameters shown above must be communicated to ERI for comprehensive assessment.**

**WMYO ALLOCATION ANALYSIS  
SEPTEMBER 2017**

tvstudy v2.2.3 (Dxtpx3)  
Database: localhost, Study: WMYO 725 kW, Model: Longley-Rice  
Start: 2017.08.30 18:48:51

Study created: 2017.08.30 18:43:33

Study build station data: LMS TV 2017-08-29 (11)

Proposal: WMYO D16 DT BL SALEM, IN  
File number: PowerCheck1  
Facility ID: 34167  
Station data: User record  
Record ID: 55  
Country: U.S.

Stations affected by proposal:

Call	Chan	Svc	Status	City, State	File Number	Distance
WTTK	D15	DT	CP	KOKOMO, IN	BLANK0000024884	173.7 km
WLCU-CD	D15	DC	CP	CAMPBELLSVILLE, KY	BLANK0000028622	119.8

WCET	D17	DT	CP	CINCINNATI, OH	BLANK0000026835	143.7

No non-directional AM stations found within 0.8 km

No directional AM stations found within 3.2 km

Record parameters as studied:

Channel: D16  
Latitude: 38 21 0.24 N (NAD83)  
Longitude: 85 50 56.88 W  
Height AMSL: 588.9 m  
HAAT: 390.4 m  
Peak ERP: 725 kW  
Antenna: Omnidirectional  
Elev Pattrn: Generic  
Elec Tilt: 0.8

38.9 dBu contour:

Azimuth	ERP	HAAT	Distance
0.0 deg	725 kW	368.7 m	104.8 km
45.0	725	423.3	109.9
90.0	725	442.5	111.6
135.0	725	450.4	112.2
180.0	725	435.3	111.0

225.0	725	335.6	101.8
270.0	725	348.1	103.0
315.0	725	329.7	101.3

Database HAAT does not agree with computed HAAT  
 Database HAAT: 390 m Computed HAAT: 392 m

\*\*Proposal service area extends beyond baseline plus 1.0%  
 Proposal service area population is more than 95.0% of baseline

Distance to Canadian border: 456.4 km

Distance to Mexican border: 1708.0 km

Conditions at FCC monitoring station: Allegan MI  
 Bearing: 358.9 degrees Distance: 473.1 km

Proposal is not within the West Virginia quiet zone area

Conditions at Table Mountain receiving zone:  
 Bearing: 282.8 degrees Distance: 1676.3 km

No land mobile station failures found

Study cell size: 2.00 km  
 Profile point spacing: 1.00 km

Maximum new IX to full-service and Class A: 0.50%  
 Maximum new IX to LPTV: 2.00%
