Repacking channel change of KUOT-CD

FCC file number BLTA-20130110ABI

1. The purpose of the within application is to obtain a Construction Permit to change the facility output channel to 21. Construction is on the same site, ASR #11011510 at the same height as the existing channel 19 installation.
2. NIER is less than 5% of the limit for this facility at head height; no significant construction is contemplated. Antenna will be replaced by a slightly shorter model which is otherwise virtually identical to the existing unit.
3. OET69 study shows full compliance with all applicable portions of §74.793; hence, no unacceptable interference is generated. This claim depends on the change of channel of KTOU-LD, BLDL-20110519AAQ to channel 21 in a coordinated process.

A handwritten signature in black ink, appearing to read "Jim McDonald", with a stylized flourish at the end.
