

Application Amendment

The instant application amends FCC File No: 0000029984 to modify the proposed ERP from 365kW to 299kW. The reduced ERP is also reflected in the updated Construction Permit RFR Certification and TVStudy Allocation Analysis attachments. No other changes are proposed.

Background

On October 18, 2017 it was discovered that the original application did not consider or protect the Canadian facilities CKWS-DT-1 and CIII-DT. It was discovered that when the facilities were considered in a TVStudy v2.2.3 analysis with the proposed ERP at 365kW ERP, CKWS-DT-1 receives 0.54% percent interference which is prohibited.

Amendment

Reducing the ERP from 365kW to 299KW mitigates the prohibited interference to CKWS-DT-1 and thus no prohibited interference is caused to any US or Canadian stations.
