

ENGINEERING STATEMENT

In support of a request for

Displacement for LPTV Translator Application

K22IC-D Channel 36

Strong City, OK

Facility ID: 168315

PURPOSE

MARSAND, INC. has been retained by Oklahoma Community Television, LLC ("OKCT"), licensee of digital TV translator K22IC-D, the "station", in Strong City, OK, to prepare this engineering statement in support of a displacement application and accompanying Special Temporary Authority (STA).

DISCUSSION

The station currently operates on channel 22 and receives its programming over the air on channel 43 from K43KT-D in Elk City, OK. OKCT is also licensee K43KT-D. K43KT-D has received a letter from T-Mobile providing 120 day notice to vacate its channel 43 before T-Mobile commences operations or testing as K43KT-D will likely cause interference operating on its current channel. OKCT proposes to change the channel for K43KT-D from 43 to channel 22 in a separate filing and requests a waiver of the Displacement Freeze in an accompanying STA.

Given the K43KT-D displacement to channel 22 and that K22IC-D cannot both receive and transmit on channel 22, OKCT respectfully requests a waiver of the Displacement Freeze for this application to move to channel 36. The grant of this waiver will allow the station to continue servicing its viewers with minimal interruption.

INTERFERENCE STUDY

An interference study was performed on the proposed facility using the FCC TVStudy v2.2.3 software, and the results of which show no predicted new interference in excess of the

allowable 0.50% to full-service and Class A stations or 2.00% to other LPTV's. A summary is included as **Exhibit 1**.

ENVIRONMENTAL STATEMENT

The proposed facility has been evaluated according to FCC OET Bulletin No. 65 "Evaluating Compliance With FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields", Edition 97-01, and has been found to comply with the limits set forth in Section 1.1310 of the Rules. The total exposure as defined by the ANSI standard computations for occupational/controlled area is $0.06 \mu\text{W}/\text{cm}^2$, or 0.02% of the $2.02 \text{ mW}/\text{cm}^2$ maximum. The total exposure as defined by the ANSI standard computations for general population/uncontrolled area is 0.01% of the $403 \mu\text{W}/\text{cm}^2$ maximum. The proposed facility contributes power densities less than 5% of the exposure limit at this site and is therefore categorically excluded from further RF exposure evaluation. The Applicant agrees to maintain full compliance with the safety precautions to workers on the tower (controlled) and the general public (uncontrolled) by reducing or removing radiated power during the time of construction or maintenance on or near the antenna. The Applicant also certifies that it, in coordination with other users of the site, will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from Radiofrequency Electromagnetic exposure in excess of FCC guidelines

CONCLUSION

It is respectfully requested that the Commission grant this displacement application and accompanying request for STA for the facilities as specified herein.

DECLARATION

David Sanderford, EIT, declares and states that he is a graduate Electrical Engineer with a Bachelor of Science Degree in Electrical Engineering from the Georgia Institute of Technology, and his qualifications are known to the Federal Communications Commission, and that he is Vice-President of MARSAND, INC., a Registered Professional Engineering firm in the State of Texas, and that firm has been retained by Oklahoma Community Television, LLC, to perform the engineering support as contained in this report.

All facts contained herein are true of his own knowledge except where stated to be on information or belief provided by others, and as to those facts, he believes them to be true.

I declare under penalty of perjury that the foregoing is true and correct.

David Sanderford, EIT
Vice-President - MARSAND, INC.
