Construction Permit Certifications

A commission grant of this application would not be an action which would have a significant environmental effect for the following reasons:

1. This is an established communications site serving the area and there is already another much larger tower on the site
2. The applicant does not intend to erect another tower at the site or place another building. The antenna and equipment will be housed on or in existing structures.
3. The site is secured from public access. The transmitter power is only 50 watts and the applicant will allow further power reduction as necessary to protect authorized workers from harmful radiation levels.
4. The application is only for the purpose of changing to a lower channel in accordance with the spectrum repack.
