RF Hazard Statement

KKPX San Jose, CA
Channel 33

The facility proposed in this application will have an effective radiated power (ERP) of 1000 kW and a center of radiation 432 meters above ground level (AGL). An analysis of the radiation levels at 2 meters AGL indicates that the RF exposure level is well below the allowable limit for an uncontrolled area and therefore meets the requirements. All other current safeguards related to the site with regard to both workers and the general public will remain in place.

The licensee, in coordination with the other users of the transmission facility, shall reduce power or cease operation as necessary to protect persons having access to the tower or antenna from RF energy in excess of the FCC guidelines.
