

Exhibit 1- Environmental Assessment

No assessment is required. The proposed tv translator antennas are going on an existing tower that supports two-way antennas. This site is in a remote part of Minnesota. The antennas are atop a 300 foot high tower such that no RF exposure will occur from the translator to anyone standing on the ground. The tower is posted with RF warning signs, and tower workers are advised to call for a transmitter shut down if they need to climb. The only animals near the site are, wolves, coyotes, deer and rabbits. The site is located on Tribal property, and is not in an environmentally sensitive area.
