REASON FOR OPERATION AT REDUCED POWER

Exceptionally heavy rains, wind, and electrical storms during the past two weeks have caused repeated power outages. The power going on and off damaged the power amplifier, requiring the station to switch to a small transmitter to stay on the air.

The station's transmitter is old, and new parts are no longer available. The station is considering options for repair or replacement.

The licensed effective radiated power (ERP) is 3.0 kW. The station is currently operating at 1.2 kW ERP.
