

KSL-TV, a member of DTV Utah LC, will be transitioning to a new antenna and transmitter this summer in order to comply with a new channel assignment issued by the FCC in Phase One of the Repack. In order to make this change, the construction phase of this move will require KSL-TV to cease operation on the current antenna while the new one is installed.

To continue operation during this time, KSL-TV will need to operate on a standby antenna on its current channel at reduced power for several months while the new antenna and transmission facilities are constructed. It is estimated that this condition will remain until September 10th, 2018.
